

Logic, Vol. 2 (Classic Reprint)

Excerpt from Logic, Vol. 2 Mathematics is the best example of a Formal Deductive Science; Mathematics treats of Quantity in the abstract, so far as definitely expressible, Notions of Mathematics.; Enumeration of the principal Notions, with a view to the propositions, Propositions of Mathematics.; Logically viewed these are of the nature of propria; the predicate is deducible from the subject, Definition in Mathematics.; Certain of the Notions are Ultimate; the rest are definable by derivation. Ultimate notions of Arithmetic; of Geometry, Axioms of Mathematics.; These should be (1) Real Propositions; (2) underived within the science, Euclids axioms tested. Postulates, Divisions of Mathematics :- Arithmetic.; Groundwork and Propositions of Arithmetic, Algebra.; Extension of Arithmetic by using symbols of numbers and signs of operation.; Algebra shows the equivalence of different operations, and renders them mutually resolvable.; The signs and rules of operation have to be adjusted by being verified.; The highest form of the Algebraical problem is the Resolution Of Equations.; Geometry.; Order of topics. Euclids proving the fourth proposition is a mistake; it should have been assumed on the basis of induction.; Ends served, in elementary Geometry, by the reference to Diagrams,About the PublisherForgotten Books publishes hundreds of thousands of rare and classic books.
